

Notes

A Multi-Tab Dashboard would increase functionality & convey the message easier

- I propose presenting this resource in a **dashboard format** as in the sample
 - **Multiple tabs:** Home, Country Profiles, About, Downloads, etc.
- I believe the “meat” of the website should be front and center
 - Home Tab for the most important visualizations: global map, summary table, etc.
 - Current introductory text could be moved to the “**About**” tab/section
 - Accompanying data to the “**Downloads**” tab/section
